Doxorubicin sold under the trade names Adriamycin among others, is a chemotherapy medication used to treat cancer. Doxorubicin is a cytotoxic anthracycline antibiotic isolated from cultures of Streptomyces peucetius var. caesius. Doxorubicin binds to nucleic acids, presumably by specific intercalation of the planar anthracycline nucleus with the DNA double helix. Doxorubicin was approved for medical use in the United States in 1974.

SynZeal Research offers all Doxorubicin related impurities which certified COA with all characterization data like IR, Mass, HPLC purity, NMR & TGA report. We also provide CMR, DEPT and detailed structure characterization report as per requirements. Doxorubicin related products are being used by major pharmaceutical companies across the globe for their ANDA/DMF filing.
