Hydrochlorothiazide

A thiazide diuretic often considered the prototypical member of this class. It reduces the reabsorption of electrolytes from the renal tubules. This results in increased excretion of water and electrolytes, including sodium, potassium, chloride, and magnesium. It has been used in the treatment of several disorders including edema, hypertension, diabetes insipidus, and hypoparathyroidism.

SynZeal Research offers all hypoparathyroidism related impurities which certified COA with all characterization data like IR, Mass, HPLC purity, NMR & TGA report. We also provide CMR, DEPT and detailed structure characterization report as per requirements. hypoparathyroidism related products are being used by major pharmaceutical companies across the globe for their ANDA/DMF filing.

For more information on our products custom synthesis, contact SynZeal today.
