Nebivolol is a beta blocker used to treat high blood pressure and heart failure. It is generally less preferred than other beta blocking agents and has a more favorable side effect profile.

Nebivolol was patented in 1983 and came into medical use in 1997. Serious side effects may include heart failure and bronchospasm. Its use in pregnancy and breastfeeding is not recommended. It works by blocking B1-adrenergic receptors in the heart and dilating blood vessels.

SynZeal Research offers all Nebivolol related impurities which certified COA with all characterization data like IR, Mass, HPLC purity, NMR & TGA report. We also provide CMR, DEPT and detailed structure characterization report as per requirements. Nebivolol related products are being used by major pharmaceutical companies across the globe for their ANDA/DMF filing.
