Valsartan

Valsartan is an angiotensin-receptor blocker (ARB) that may be used to manage hypertension and heart failure. Many studies have demonstrated the efficacy of valsartan in reducing blood pressure (BP) in many patient populations (including elderly, women, children, obese patients, patients with diabetes mellitus, patients with chronic kidney disease (CKD), patients at high risk of cardiovascular (CV) disease, African Americans, Hispanic Americans and Asians) and in improving the clinical outcome in cardiovascular (CV) disease and chronic kidney disease (CKD).

Valsartan was initially approved in 1996 in Europe for the treatment of hypertension in adults. Shortly after, in 1997, this drug was approved in the United States. This drug is generally well-tolerated with a side-effect profile superior to that of other antihypertensive drugs.

SynZeal Research offers all Valsartan related impurities which certified COA with all characterization data like IR, Mass, HPLC purity, NMR & TGA report. We also provide CMR, DEPT and detailed structure characterization report as per requirements. Valsartan related products are being used by major pharmaceutical companies across the globe for their ANDA/DMF filing.

For more information on our products custom synthesis, contact SynZeal today.
